

University Admit Eligibility Predictor

Problem Statement:

A lot of students in today's generation are interested in pursuing their education away from their home countries. The number of Foreign students pursuing their education from the India rapidly increased. With this trend in act, each applicant has to face a tough competition to get admission in their dream university. Generally, the students are unaware about the procedures, requirements and details of the universities. Many students seek help from the education consultancy firms to help them successfully secure admission in the universities which are best suitable for their profile, for this they have to invest huge amount of money as consultancy fees. Apart from these the education consultancy firms there are few websites and blogs that guide the students on the admission procedures. The drawback of the currently available resources is that they are very limited and also they are not truly dependable taking into consideration of their accuracy and reliability. So, students are often worried about their eligibility to get into a university. The objective of this research is to develop a system using machine learning algorithms, we will name it as University Admit Eligibility Predictor (UAEP). It will help the students to identify the chances of their application to a university being accepted. With this, students can help themselves to shortlist the universities and get a fair idea about their admissions.

- Who does the problem affect? - Students who apply for admissions to universities
- What is the issue? - Students don't know their admission chances
- When does the issue occur? - While students apply for a university
- Why is it important that we fix the problem? - So that students don't waste their time and money.
